PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in AWS, Terraform, Docker, and Kubernetes (EKS), building secure, scalable cloud-native infrastructure. Skilled in CI/CD with GitHub Actions, Jenkins, and GitLab, with integrated security scanning, GitOps, and observability.

EXPERIENCE

Associate DevOps Engineer, *CloudNexus* 03/2026 – Present | Bhopal, MP

- Built modular Terraform and Python IaC for 15+ environments with immutable infrastructure, cutting deployment time by 60%.
- Created GitLab CI/CD pipelines with caching, automated testing, and security scanning, speeding deployments by 45% and saving 15+ hours weekly.
- Ran Kubernetes workloads with HPA, resource limits, and ingress routing, maintaining 99.99% uptime for 20+ microservices.
- Wrote Python and Bash scripts for Linux servers, cutting operational toil by 35% and eliminating configuration drift across 50+ instances.
- Set up Prometheus, Grafana, and ELK for centralized logging, reducing MTTR by 40%.

DevOps Support Intern, *HisanLabs Pvt. Ltd.* 08/2025 – 02/2026 | Pune, India

- Provisioned AWS infrastructure (VPC, NAT Gateway, IAM) with Terraform, cutting environment setup from days to under 20 minutes with 100% audit compliance.
- Containerized microservices with Docker on EKS, running 50+ zero-downtime Helm upgrades with 0 rollbacks and 25% lower compute costs.
- Built GitHub Actions and Jenkins CI/CD with SonarQube, reducing production vulnerabilities by 50%.

PROJECTS

DevSecOps CI/CD Pipeline with GitOps Deployment

- Built an end-to-end DevSecOps CI/CD pipeline with GitHub Actions to automate build, test, and Docker image creation, cutting release time by 60%.
- Integrated SonarQube and Trivy for code quality and container security scanning, catching 7-15 vulnerabilities per release before production.
- Implemented GitOps deployment with ArgoCD on Amazon EKS, using Terraform and Helm for provisioning and releases, cutting manual deployment steps by 80% and environment provisioning to under 10 minutes.

Cloud-Native DevOps Deployment of Real-Time Multiplayer Application

- Built and shipped a real-time multiplayer application using React, Node.js, Socket.io, Docker, and Amazon EKS, with Kubernetes Deployments, Services, and an Nginx reverse proxy handling 100+ concurrent sessions with secure routing.
- Provisioned AWS infrastructure including VPC, EKS, ECR, and Load Balancer using Terraform, cutting new-environment deployment time to under 15 minutes for scalable, repeatable cloud deployments.
- Engineered CI/CD workflows with GitHub Actions, integrating Docker, Amazon ECR, Terraform, and Kubernetes for automated build, infrastructure provisioning, and application deployment, shortening release cycles by 60%.

SKILLS

Cloud:
AWS (EC2, EKS, VPC, IAM, S3, ECR, Route 53, ALB/NLB, Auto Scaling, CloudWatch), Azure

CI/CD & DevSecOps
GitHub Actions, GitLab CI/CD, Jenkins, Azure DevOps, SonarQube, Trivy, Snyk

Networking & Security
Nginx, NAT Gateway, Security Groups, NACLs, Ingress, FortiGate

IaC & Containers:
Terraform, Docker, Kubernetes, Helm, ArgoCD, Karpenter, KEDA

Monitoring & Observability
Prometheus, Grafana, CloudWatch, ELK Stack

Programming & OS:
Python, Go, Bash, YAML, Linux (Ubuntu), Git

EDUCATION

B.Tech in Information Technology, *Pimpri Chinchwad College Of Engineering* 03/2020 – 04/2024 | Nigdi, Pune
CGPA: 7.4

CERTIFICATIONS

- Data Structures and Algorithms (Self-Paced) - GeeksforGeeks
